Cranky Cockpit Club 3D Printed Pilots (Daring Dorothy, Ike (I-Mac) MacMaster, Kenjiro "Kenji" Sato, and Major Disaster)

It's time to give your cockpit a serious upgrade!

Whether you're needing to find a fearless flyer for your nimble .20-sized model or finishing your majestic quarter-scale masterpiece, OSMW has the perfect pilot bust ready for takeoff. From gritty realism to goofy charm, our exclusive line-up has everything from monsters to classic airmen.

We've just added these 4 pilots to the club.

- **"Daring" Dorothy** earned her nickname during the Great Air Race of 1932. Halfway across the Rockies, her fuel line began to leak. Rather than landing, Dorothy climbed out onto the wing—mid-flight—and used a her scarf and a piece of chewing gum to plug the spray. Upon hearing the story, the press went wild, and her moniker "Daring Dorothy" was born.
- **Ike "IMAC" MacMaster** entered a regional aerobatic competition on a dare when he was 24. Flying a patched-together Pitts Special he'd rebuilt from three different wrecks, Ike stunned the judges with a routine that blended precision with raw, fearless creativity. Ike wasn't just a daredevil. He was a craftsman. He built and modified his own aircraft, insisting that a pilot should understand every bolt and rivet.
- **Kenjiro "Kenji" Sato** In 1941, Kenjiro was drafted into the Imperial Japanese Navy Air Service and was a natural flier. His instructors noted that he flew with a precision that was almost artistic. He believed that by becoming a "Shinpū" (Divine Wind), he was a shield of protection for his family back home.
- **Major Disaster**, had a gift for pushing aircraft (and instructors) to their limits. His nickname came flying a routine low-altitude drill when a freak electrical surge knocked out half his avionics. Flying by instinct, dead reckoning, and a stubborn refusal to let gravity win, he landed safely... directly in the middle of a live-fire tank range.

We 3D-print these ourselves in-house, and each one is made from flesh-toned, UV-resistant PETG filament, built to handle sun, wind, and wild aerial adventures. We print them in ultra-thin layers to lock in those crisp details, and keep them feather-light thanks to using minimal infill.

Our pilots arrive unpainted and ready to be customized with your choice of enamel or acrylic paints.

We have 30+ pilots and all are available in six sizes to fit aircraft from 1/8 to 1/3rd scale.

Individual weight is an average of .2 ounces (5.6 grams) for the 1/8 size, up to an average of 4.9 ounces (138.9 grams) for the 1/3rd size.

Retail pricing: \$8.95 (1/8) to \$28.95 (1/3).
