RADIO CONTROL KITS * WOOD KITS * DECOR * LASER CUTTING SERVICES

04/2026

Press Release

Sunday Fighter (Barnstormer) from Old School Model Works

We're introducing the latest in our line of kits that you can not only build and fly successfully, but personalize them to your own taste. We're continuing to bring back great designs from the past and rework them to incorporate modern, laser-cut techniques to make kit building better than ever. All of our kits are designed, cut and packaged in our facility right here in the USA. The included premium hardware package is also sourced from brand-name, USA manufacturers to guarantee the best quality.

Smooth and not too fast. Eye-catching "scale" looks. A snap to build and a great cruiser. Turn your field into your own private airshow. Easily perform simple loops and wingovers that made the age of barnstorming so exciting.

The original Sunday Fighters were the brainchild of Ken Willard back in the early 1970s. His were small, .049-powered 3-channel models and proved quite popular. Now, we've taken this idea, enlarged it, and re-engineered it to make them as fun to build as they are to fly. This version has a lot of Curtiss Jenny in it - so we call this the Barnstormer.

Because of the interlocking design and high-quality laser cutting of the parts, the Sunday Fighter is a quick build. Not only does it build quick, but it also builds straight and true, as all of the parts are designed to align properly with a minimum of fuss and alignment tools. The wings are removable for storage/transport and for giving access to the extra-large cabin area. From there, you have easy access to install most any brand of radio and control linkages. However, the fully assembled model can fit in the trunk of most mid-sized cars. Up front, we've designed a hatch that covers the battery/tank compartment. This area will easily handle 3s packs and 6-ounce tanks.

Whether you choose to power your Barnstormer with electric or glow power, we've got you covered. Glow engines can be mounted side, inverted, or even upright with a little modification. Electric motors can be mounted using the included Motor box, which will help space your motor at the proper distance.

Go true "old-school" with 3-channel control, or opt for functional ailerons (4-channel).

This just might be the most fun you've had in a long time.

Specifications:

Wingspan: 59.6 inches

Wing Area: 863 sq. inches

Length (airframe only): 34 inches

Weight: 3.5-4 lbs. (rtf)
Radio: 3-4 channel
Engine: Glow - .20-.30 glow engine (equivalent electric power system)
Retail Price - \$224.95
