Press Release

Agri-Gator from Old School Model Works

Who says you need a big runway, a complicated build, or a hangar full of expensive equipment to have a great time flying? Meet the Agri-Gator — a fun, easy-building little model that's ready to take a bite out of your local flying field!

Inspired by the look of full-scale crop dusters, our Agri-Gator packs plenty of personality into a simple, lightweight design. It's beginner-friendly enough for first-time builders, yet offers plenty of flying enjoyment for experienced pilots.

With a low parts count, all-balsa-and-plywood construction, and cleverly designed interlocking parts, you'll spend less time scratching your head and more time enjoying the build.

The unique Jedelsky wing keeps construction straightforward while delivering surprisingly good flying performance. The wing is attached with simple rubber bands, making assembly quick and easy. No complicated hardware, fancy building techniques, or engineering degree required!

Don't worry about expensive iron-on coverings, either. The Agri-Gator can be flown as-is with no problems at all. But if you'd like to make it more colorful, the Agri-Gator is easily dressed up with colored pencils, crayons, markers, or whatever creative mischief you have in mind. We've even included a stencil so you can put our gator artwork on each side of the fuselage if you want.

The Agri-Gator doesn't need a runway the size of a cornfield. It's right at home in schoolyards, ballfields, parks, and other small flying spaces.

All it needs is a simple 3-channel radio system with sub-micro servos and a modest 2S 650mAh battery. Expect 7+ minutes of flying fun per charge, depending on how aggressive you are with the throttle.

While we've simplified the construction, at the same time we've added in a whole lot of stability. The wing's dihedral naturally helps you recover and get back to level flight without the need for electronic stabilization systems.

And don't let its simple design fool you! The Agri-Gator flies beautifully and has enough personality to pull off loops, hammerheads, wing-overs, and other gentle aerobatics. It's a whole lot more than just a pretty design - it’s got teeth!

Our Agri-Gator is all about getting more people in to building, creating, and enjoying the fun of flying R/C airplanes. It's the perfect model to show a novice or new club member the basics of

building, as well as radio and electric power setup - in a short amount of time. So grab your building board, some waxed paper and glue, and a few simple tools. The Agri-Gator is proof that you don't need a complicated airplane, expensive equipment, or a giant flying field to have a ridiculous amount of fun.

Specifications:
Wingspan: 39 inches
Wing Area: 195 sq. inches
Length (airframe only): 23 inches
Weight: 9-10 oz.(rtf)
Radio: 3 ch. (rudder, elevator, throttle)
Power: 70+ watt electric motor, 20+ amp ESC, 2s 650mAh LiPo

Retail Price: $129.95
